

## Office to enterprise Product Data Management

DDM Replicator provides local database performance where companies are experiencing network performance and stability issues between national or international sites. This solution works seamlessly alongside the DDM Remote Intelligent File Servers (RIFS) fully optimising multi-site, global performance.

Globalisation, off shoring and outsourcing is a reality for most organisations in order to reduce costs and maintain competitiveness in their given markets, DDM Replicator will allow you to work across multiple sites, giving you fast searching tools and access to the latest information.

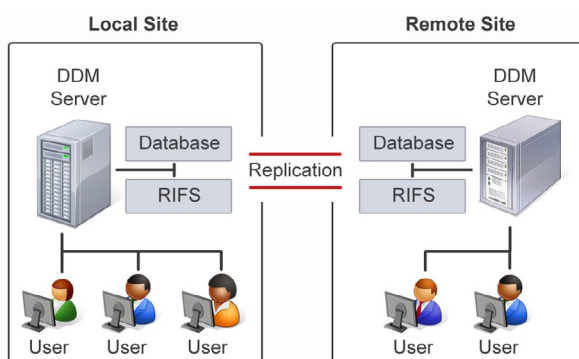

### Key Features

- LAN performance in a WAN environment
- Single license to support multiple servers
- Any number of servers can be supported
- Configurable replication frequency
- Full database (metadata) replication
- Full admin replication including user accounts
- Priority handling of conflicts with notification

### Key Benefits

- No suffering from slow internet connections
- Teams continue working if the network is down
- Single cost for any number of servers
- Increased ROI as your business grows
- Administrative cover from all sites
- Reduced duplication of products and documents
- Promotes product rationalisation and reuse

*DDM multiple replicated databases with multiple file servers*

### Licensing and System Requirements

#### Server minimum requirements

Windows Server 2003 Standard / Server 2008  
500mb Disk Space + Space for vaulting files

#### Licensing

The DDM Replicator is licensed on an enterprise basis. One DDM Replicator license supports as many remote servers as required by the organisation.

Separate DDM RIFS (Remote Intelligent File Servers) licenses are required for each remote site including the primary DDM server.
